

The Runtime Errors Presentation

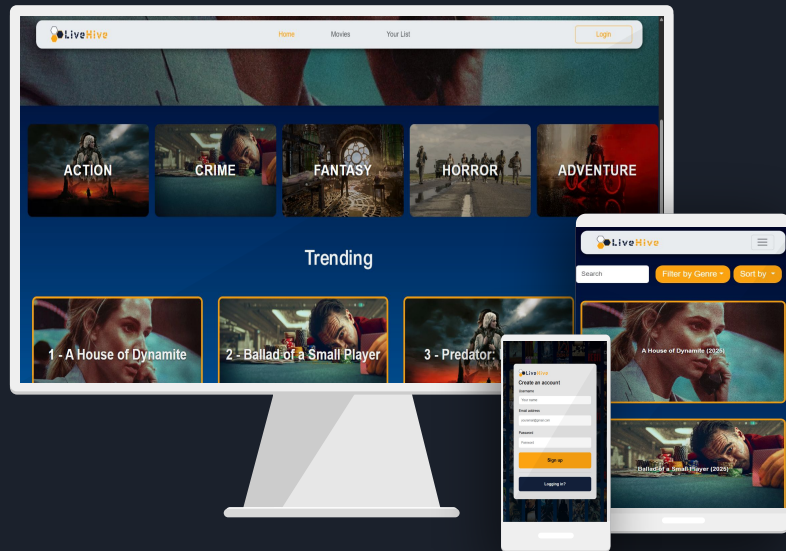

DV100: Group 8

Wihan Burger (241278)
Marizelle Botes (251214)
Tshedza Mosehane (251056)
Néll Janse van Rensburg (251061)

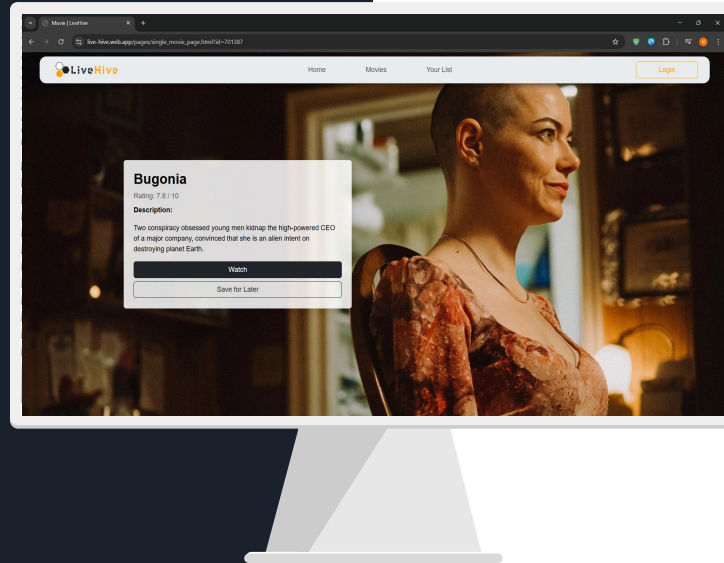

Project: **LiveHive**

A streaming platform that lets users discover, watch, and manage movies and shows seamlessly, with responsive design and integrated API functionality for up-to-date content.

Roles: Back-end Developer & Admin Manage

Page: Single Movie Page

Responsability: Single Movie page layout/JS/HTML, Data population, Trailer

Challenges and Lessons:

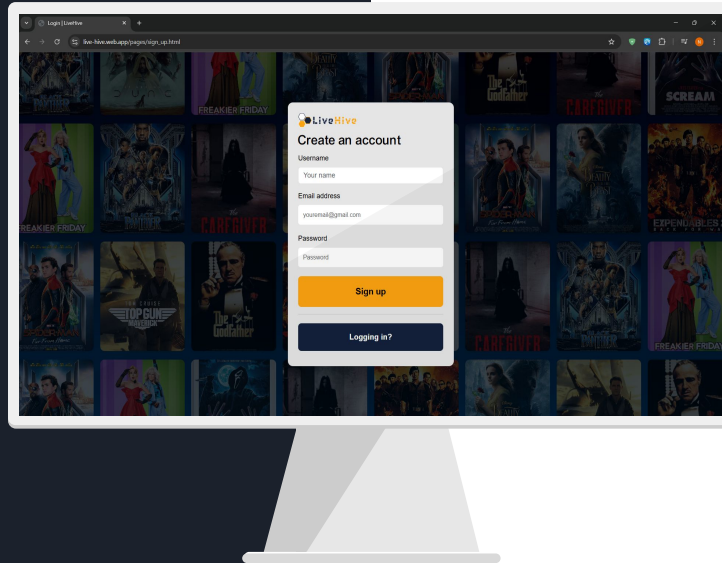

The main challenge I faced was accurately populating all the information, ensuring that details were in the right place, everything stayed updated, and nothing broke between pages. The key lesson I learned was how to make webpages properly responsive and how to handle API communication effectively. Biggest challenge was the movie trailer, which I could make function.

Collaborations:

I mainly collaborated with Wiham and Nell on the design, which worked very well. They helped merge the design and the API communication, making the process smoother and more efficient.

Roles: Front-end Developer & Product Manager

Page: Sign-up / Login Page

Responsibility:
Login page HTML & CSS

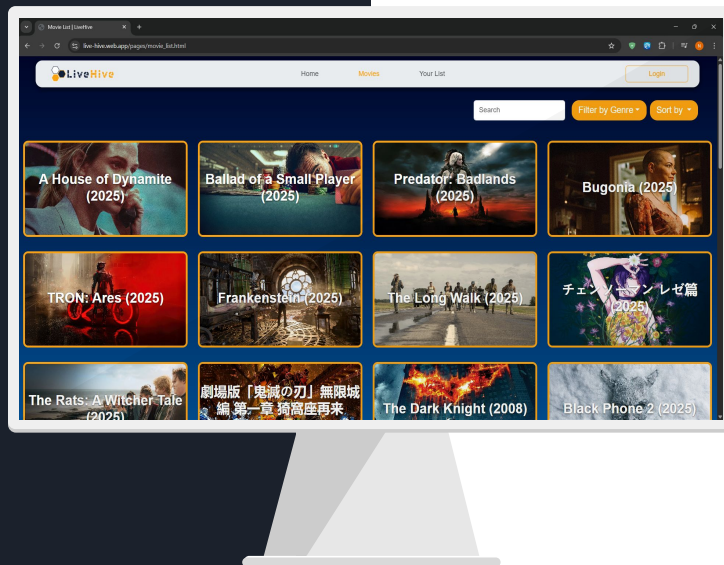

Challenges and Lessons:
I would say that what I found challenging was to put the logo in HTML.

The lesson I learned was to work as a team, and then good things happen.

Collaborations:
I must say I collaborated with the others great because if you struggled with something, they always helped you no matter what.

Roles: Back-end Developer & Github Manager

Page: Movie List Page

Responsability:

Movie list page JS, API original call logic, Login logic & Watchlist logic

Challenges and Lessons:

- Variable type sensitivity
- The power of jQuery
- Array methods
- Returning to HTML

Collaborations:

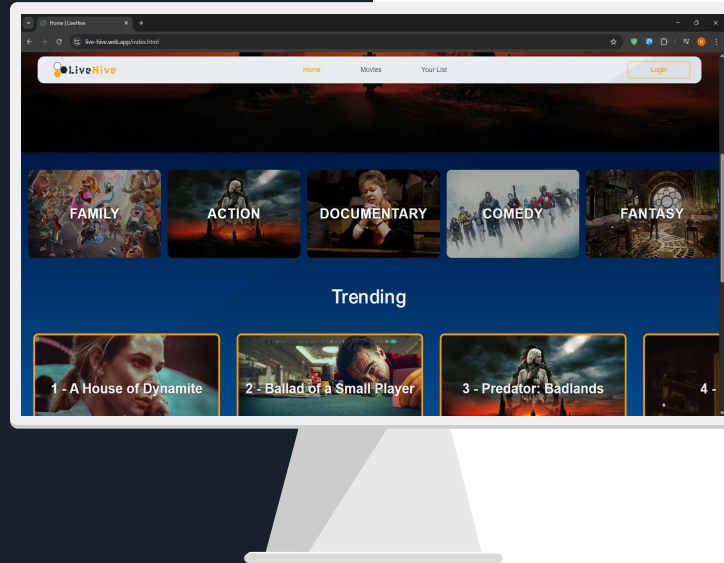

Being able to take the designs from Wihan and simple push to them was a very streamline experience.

Tshedza helped a lot with improving on my own functions and I learned a lot by studying his.

Marizelle's eye for detail was super helpful in pointing out potential user experience mistakes and clashing styles.

Roles: Front-end Developer & Quality Manager

Page: Home Page

Responsability:

- Homepage HTML, CSS & navbar
- Movie list page HTML & CSS
- Watchlist page HTML & CSS
- Sign-up scroll background

Challenges and Lessons:

I would say that what I found challenging was making the cards be able to scroll without the shift key. As well as the card hover animation (making the text appear). Poster Background System (for the Sign-In Page) was also a big challenge to customize them correctly.

The lesson I learned was that I can rely on my group members and that they'll help if I need, I also learned a lot about HTML and CSS compared to what I knew.

Collaborations: Néll Janse was a big help with feedback and tips, as well as helping with pushing the API onto my pages.
